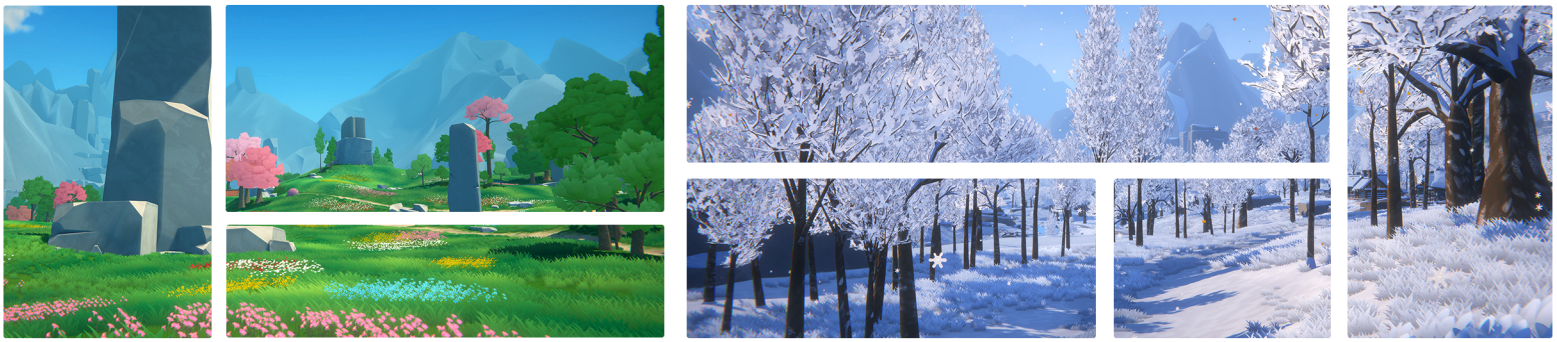
Fantasy Bundle

LOW POLY NATURE WINTER PACK



THANK YOU FOR PURCHASING THE PACK

UPGRADING TO URP

The project is by default uploaded to the Asset Store using the SRP platform. To upgrade to URP, just import the FantasyBundle_WR_URP.package, included in the project

GENERAL INFO

This pack can be used both for mobile and desktop platforms, you will find example scenes optimized for both. All the promo assets are captured from the SRP version of the pack, and mostly using the more complex scenes with high quality settings. Make sure you add the post processing package and use the provided PostProcerssing Profiles to get that look.

OPTIMIZATION TIPS

- SRP - use the QualitySettigns.asset provided in the project, it will modify your quality settings, including the terrain override settings, just copy the asset to Root/ProjectSettings
- URP - Use the Render Pipeline Assets provided (FB_URP...), these are set up to make sure the poroject runs as smooth as possible on every platform
- Use mobile the scene for mobile devices and as a template for other scenes
- Use the provided LayerCulling script on the camera, to set different draw distances for lights and layers, the example cameras in the scenes are already set up with it (tutorial in the CameraCulling_Tutorial.pdf)
